REMARKS

The Present Invention

The present invention relates to a pigmented cosmetic composition comprising a water-in-oil emulsion, in which the emulsion comprises (a) an oil phase; (b) an aqueous phase; (c) a pigment; (d) an emulsifier; and (e) a separation inhibitor comprising a silicone elastomer.

The Pending Claims

Claims 1-9, 11-32, and 52-58 are pending currently. Reconsideration of the pending claims is respectfully requested.

The Amendments to the Claims

The pending claims have been amended so as to more particularly point out and distinctly claim the subject matter of the present invention. In particular, the features of claim 10 have been incorporated into independent claims 1, 28, 29, and 52. As a result, claim 10 has been canceled as superfluous. Because of the cancellation of claim 10, the dependency of claim 11 has been amended. Claims 1, 28, 29, and 52 also have been amended to recite that the elastomer comprises a cetyl dimethicone copolyol, as supported by the specification at, for example, page 8, lines 28-32. Claims 53-58 have been added and are supported by the specification at, for example, page 7, line 7, through page 11, line 26. Claims 33-51 have been canceled as directed towards nonelected subject matter.

No new matter has been added by way of any of these amendments.

Summary of the Office Action

The Office Action rejects claims 1-32 and 52 under 35 U.S.C. § 112, second paragraph, as allegedly indefinite. Claims 1-4 and 7-32 are rejected under 35 U.S.C. § 103(a) as allegedly obvious over Hollenberg (U.S. Patent No. 5,143,722). In addition, claims 1-32 and 52 are rejected under 35 U.S.C. § 103(a) as allegedly obvious over Stepniewski et al. (U.S. Patent No. 5,599,533).

Discussion of Indefiniteness Rejections

The Examiner contends that the terms “a pigment,” “an emulsifier,” “a sunscreensing agent,” “a thickener,” an alcohol,” and “a preservative” are indefinite. Applicants maintain that these terms are clear and definite based on their ordinary meanings in the art and the

teachings of the specification. For example, the term pigment is described on page 9, line 3, through page 10, line 8 of the specification. The terms emulsifier and alcohol are described at, for example page 8, lines 16-32 and page 7, line 29, through page 8, line 3, respectively. Suitable sunscreens agents and thickeners are described in the specification at, for example, page 12, line 31, through page 13, line 8 and page 11, line 35, through page 12, line 30, respectively. The term preservative is described at, for example, page 13, line 26, through page 14, line 7, in the specification. Moreover, these terms are understood to be components commonly used in the art. For instance, Ash et al. (Handbook of Cosmetic and Personal Care Additives, 2nd edition, vol. 2, Synapse Information Resources, Inc.: Endicott, NY, 2002), is a standard text that is available to those of ordinary skill in the art. Ash et al. provides innumerable examples of, for example, an emulsifier or a preservative (see attachment).

Applicants point out that the meanings of the cited terms must be clear and definite since the Examiner was able to cite art against the claims that contain these terms. In particular, the Examiner was able to cite that, for example, Hollenberg discloses titanium dioxide as a sunscreens agent in the composition described therein (see Office Action, page 4, 3rd paragraph). Therefore, these terms must be definite because the Examiner understood them well enough to find comparable ingredients in other disclosures.

In view of the teachings of the specification and knowledge commonly known in the art, the pending claim are clear and definite, and the rejection should be withdrawn.

Discussion of Anticipation Rejections

Hollenberg et al. allegedly discloses a water-in-oil cosmetic composition containing an oil phase, water phase, a pigment, a sunscreens agent, an emulsifier, a thickener, an inorganic salt, a silicone elastomer, a glycol, and a preservative. Stepniewski et al. reportedly discloses a water-in-oil cosmetic composition containing an oil phase, water phase, a pigment, vitamins A and E, a sunscreens agent, a preservative, an emulsifier, a thickener, a silicone elastomer, a glycol, and an inorganic salt.

The claims have been amended to recite a pigmented cosmetic composition comprising a water-in-oil emulsion, said emulsion comprising (a) an oil phase; (b) an aqueous phase; (c) a pigment; (d) an emulsifier comprising a cetyl dimethicone copolyol; and (e) a separation inhibitor comprising a silicone elastomer, wherein the silicone elastomer comprises a dimethicone cross-polymer (see claim 1). Another embodiment of the present invention is a particulate sunscreen composition comprising a water-in-oil emulsion, said emulsion comprising (a) an oil phase; (b) an aqueous phase; (c) a particulate sunscreens agent; (d) an emulsifier comprising a cetyl dimethicone copolyol; and (e) a separation

inhibitor comprising a silicone elastomer, wherein the silicone elastomer comprises a dimethicone cross-polymer (see claim 29). A further embodiment of the present invention is a pigmented cosmetic composition comprising a water-in-oil emulsion, said emulsion comprising (a) from about 30% to about 40% by weight of an oil phase; (b) from about 30% to about 50% by weight of an aqueous phase; (c) from about 5% to about 15% by weight of a pigment; (d) from about 3% to about 6% by weight of an emulsifier comprising a cetyl dimethicone copolyol; and (e) a separation inhibitor comprising a silicone elastomer, wherein the silicone elastomer comprises a dimethicone cross-polymer, and wherein said silicone elastomer is present in an amount of from about 0.1% to about 7% by weight of said composition (see claim 52). In addition, the present invention provides a pigmented cosmetic composition comprising a water-in-oil emulsion, said emulsion comprising (a) an oil phase comprising cyclomethicone, phenyl trimethicone, cyclopentasiloxane, and dimethylpolysiloxane; (b) an aqueous phase; (c) a pigment that is surface treated with a silicone; (d) an emulsifier comprising a cetyl dimethicone copolyol; and (e) a separation inhibitor comprising a silicone elastomer, wherein the silicone elastomer comprises a dimethicone cross-polymer (see claim 58). Neither Hollenberg et al. nor Stepniewski et al. teaches or suggests any of the compositions of the present invention. Therefore, it cannot be said that either reference anticipates the present invention as defined by the pending claims.

Moreover, neither Hollenberg et al. nor Stepniewski et al. renders the present inventive compositions obvious. Nothing in either reference teaches the specific components claimed in the present invention. Moreover, nothing in the disclosures of Hollenberg et al. or Stepniewski et al. would motivate one of ordinary skill in the art to select the specific components recited in the pending claims and combine them in one composition so as to arrive at the present inventive compositions. Without such a motivation to select the specific components of the present invention, the pending claims are novel and unobvious.

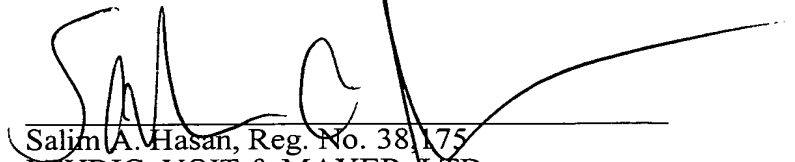

In view of the foregoing, the anticipation rejection should be withdrawn.

Conclusion

The application is considered in good and proper form for allowance, and the Examiner is respectfully requested to pass this application to issue. If, in the opinion of the Examiner, a telephone conference would expedite the prosecution of the subject application, the Examiner is invited to call the undersigned attorney.
